DRAFT AMENDMENT

[ONLY FOR PURPOSE OF DISCUSSION WITH EXAMINER]

CLAIM SHEET

58. (Proposed Amended) A recording device for recording at least one of image data and voice data on a detachable recording medium comprising:

selection means for selecting a generation condition of image data or voice data;

generating means for generating image data or voice data in accordance with the generation condition selected by said selection means;

retrieving means for retrieving information pre-recorded in the detachable recording medium, the pre-recorded information being provided for determining a file name;

file name determining means for determining, in accordance with the information retrieved from the detachable recording medium, a file name, name by combining a character, selected in accordance with the generation condition selected by said selection means, and a serial number number, ~~in accordance with the information retrieved from the detachable recording medium;~~ and

recording means for recording, on the detachable recording medium, a file including the image data or voice data generated by said generating means using the file name determined by said file name determining means.

Appl. No. 08/892,092
03560/001994

59. (Previously Presented) A recording device according to Claim 58,
wherein the information pre-recorded on the detachable recording medium is
information for determining a plurality of characters to be used for a file name.

60. (Proposed Amended) A method for recording at least one of image data
and voice data on a detachable recording medium comprising:

selecting a generation condition of image data or voice data;

generating image data or voice data in accordance with the generation condition
selected in said selecting step;

retrieving information pre-recorded in the detachable recording medium, the pre-
recorded information being provided for determining a file name;

determining, in accordance with the pre-recorded information, a file name, name
by combining a character, selected in accordance with the generation condition selected in said
selecting step, and a serial number number, ~~in accordance with the information retrieved from the~~
~~detachable recording medium;~~ and

recording, on the detachable recording medium, a file including the image data or
voice data generated in said generating step using the file name determined in said file name
determining step.

Appl. No. 08/892,092
03560/001994

61. (Previously Presented) A recording method according to Claim 60, wherein the information pre-recorded on the detachable recording medium is information for determining a plurality of characters to be used for a file name.
62. (Previously Presented) A recording device according to Claim 58, wherein said file name determining means determines a file name in accordance with a recording condition of the image data or voice data generated by said generating means and the pre-recorded information retrieved by said retrieving means.
63. (Previously Presented) A method according to Claim 60, wherein said file name determining step includes determining a file name in accordance with a recording condition of the image data or voice data generated in said generating step and pre-recorded information retrieved in said retrieving step.
64. (Proposed New) A recording apparatus for recording at least one of image data and voice data on a detachable recording medium comprising:
- a selector that selects a generation condition of image data or voice data;
 - a data generator that generates image data or voice data in accordance with the generation condition selected by said selector;
 - a reproducing device that reproduces information pre-recorded in the detachable recording medium, the pre-recorded information being provided for determining a file name;

Appln. No. 08/892,092
03560/001994

a data processor that determines, in accordance with the information reproduced from the detachable recording medium, a file name, by combining a character, selected in accordance with the generation condition selected by said selector, and a serial number; and

a recording device that records, on the detachable recording medium, a file including the image data or voice data generated by said data generator using the file name determined by said data processor.

65. (Proposed New) A computer readable medium having stored therein an executable program for recording at least one of image data and voice data on a detachable recording medium, the program performing a method comprising the steps of:

selecting a generation condition of image data or voice data;

generating image data or voice data in accordance with the generation condition selected in said selecting step;

retrieving information pre-recorded in the detachable recording medium, the pre-recorded information being provided for determining a file name;

determining, in accordance with the pre-recorded information, a file name, by combining a character, selected in accordance with the generation condition selected in said selecting step, and a serial number; and

recording, on the detachable recording medium, a file including the image data or voice data generated in said generating step using the file name determined in said file name determining step.
